DETAILED ACTION

Information Disclosure Statement

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Drawings

2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: 17 in Fig. 1. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.
3. The drawings are objected to because the spray head in Fig. 1 and Fig. 2 does not have a reference number. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in

reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled “Replacement Sheet” in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

4. The disclosure is objected to because of the following informalities: On page 8, paragraph 25, line 3 “spray head” does not have a reference number.

Appropriate correction is required.

Allowable Subject Matter

5. Claims 1-20 are allowed.
6. The following is an examiner’s statement of reasons for allowance: The reasons for allowance are that the closest prior art, U.S. patent no. 5,112,357 to Bjerklund et al., describes a method for removing a gaseous component from a liquid; which comprises the steps of (a) providing a liquid which contains the gaseous component; (b) dissolving stripping gas (carbon

Art Unit: 1724

dioxide or nitrogen) that is inherently more soluble in said liquid (water) than said gaseous component (oxygen) is, into said liquid while maintaining pressure on said liquid (the liquid pressure in the liquid input pipe is preferably in the range of about 15 to about 75 psig, and the gas injected into the liquid input pipe is preferably at about the same pressure as the pressure within the liquid input pipe before injection of the gas); (d) feeding said liquid into a vessel wherein a gas space is maintained over said liquid (the dispenser head 24 is configured to break the gas and liquid flow into a plurality of fine streams), the pressure of said gas space (2 psig) is less than the pressure upstream (the liquid pressure in the liquid input pipe is preferably in the range of about 15 to about 75 psig), whereby said gaseous component evolves from said liquid in said vessel, and separately withdrawing said evolved gaseous component (through gas discharge pipe 40), and said liquid from which said gaseous component has evolved, from said vessel (through liquid discharge pipe 44) at rates which maintain the pressure of said gas space below the pressure upstream. (See Fig. 1 and column 2, line 60 to column 4, line 65.) Bjerklund does not disclose applicant's combination of steps including a step of (c) passing said liquid through a means which reduces the pressure thereon occurring after the step of (b) dissolving stripping gas and before the step of (d) feeding said liquid into a vessel for separation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 1724

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

8. This application is in condition for allowance except for the following formal matters:

See above comments concerning the drawings and specification.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
